

IBM Data Science Professional Certificate - Capstone Project Report

Introduction

Travelling has become more of a hobby than passion for youngsters. But while travelling, many come across a lot of problems like need of hotels, need to visit best nearby places, getting lost in unknown places and many more. This project is aimed to make better travel experience to New York City easier by providing all nearby locations, local areas, hotels, best places to visit in New York City with help of *Foursquare* applications and datasets.

Data

The data source used in this project is from Foursquare, which is a technology company that uses location intelligence to build meaningful consumer experiences and business solutions. The project is built with the help of Foursquare location data. Foursquare API provides great amount of quality data about locations (cafe, restaurant etc.). Using this data will allow tourists to easily decide where to go when they are in a specific city.

Methodology

First, the geojson data for New York City's neighborhood is obtained. Then, the city data is analyzed using the Foursquare API. Lastly, each area in the city and its category is identified using clustering.

Results

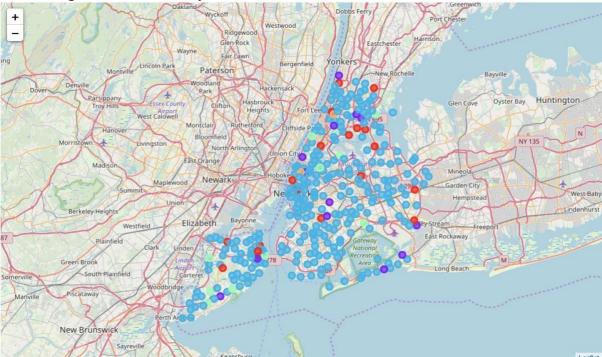

Using techniques such as K-means clustering, the results about common venues in the city was obtained. This information can be helpful to tourists since they can focus on what they are trying to experience most during their travelling (Food, culture, sport etc.). These techniques also provide the visualization of clustering of city.

Common Venues of New York City

							- ,		-	-		_
7th Most Common Venue	6th Most Common Venue	5th Most Common Venue	4th Most Common Venue	3rd Most Common Venue	2nd Most Common Venue	1st Most Common Venue	Cluster Labels	Longitude	Latitude	Neighborhood	Borough	
Donut Shop	Dessert Shop	Caribbean Restaurant	Food Truck	Gas Station	Sandwich Place	Pharmacy	2	-73.8472	40.8947	Wakefield	Bronx	0
Fast Food Restaurant	Chinese Restaurant	Basketball Court	Ice Cream Shop	Bus Station	Restaurant	Baseball Field	2	-73.8299	40.8743	Co-op City	Bronx	1
Food & Drink Shop	Metro Station	Bus Stop	Diner	Deli / Bodega	Bus Station	Caribbean Restaurant	0	-73.8278	40.8876	Eastchester	Bronx	2
Exhibit	Filipino Restaurant	Plaza	Playground	Bus Station	High School	River	0	-73.9056	40.8954	Fieldston	Bronx	3
Home Service	Food Truck	Plaza	Bank	Gym	Bus Station	Park	2	-73.9126	40.8908	Riverdale	Bronx	4
Mexican Restaurant	Deli / Bodega	Latin American Restaurant	Bar	Discount Store	Sandwich Place	Pizza Place	2	-73.9028	40.8817	Kingsbridge	Bronx	5

Falafel Restaurant	Flea Market	Women's Store	Soup Place	Caribbean Restaurant	Nightclub	Bar	2	-73.8574	40.881	Williamsbridge	Bronx	9

IBM Data Science Professional Certificate - Capstone Project Report

Clustering of New York City

Discussion

k-means clustering is a method of vector quantization, originally from signal processing, that is popular for cluster analysis in data mining. k-means clustering aims to partition n observations into k clusters in which each observation belongs to the cluster with the nearest mean, serving as a prototype of the cluster. This results in a partitioning of the data space into Voronoi cells.

Conclusion

Eventually, using *Foursquare* datasets this project successfully created a way to familiar with all the location information handy. Information such as nearby places, hotels, venues are easily accessible using data science methodology.

Note

Please refer to Final_Capstone_Presentation and Final_Capstone_Notebook for more details about this project.
